Save the Children use IBM Blueworks Live to Map the Organisation, Processes, Procedures, Policies, and Systems

Save the Children

Save the Children operates in over 100 countries, with approximately 24,000 staff members working to expand the freedoms available to children and their communities.

As a federated movement, Save the Children has a complex operational model that includes multiple entities spread worldwide.

Challenge

To maintain and enhance operational effectiveness, Save the Children must constantly adjust to the changing global socio-political and economic landscape while capitalising on new opportunities, including technological advancements.

Embracing a systems-thinking approach, the movement views the organisation as a network of interconnected components, all working together to achieve their mission for children.

To visualise the organisation as a system, Save the Children needed a tool to effectively and efficiently map and define key processes throughout the organisation.

Solution

The Business Architecture and Business Analysis team and relevant stakeholders at Save the Children have utilised IBM Blueworks Live to map their organisation's structure, linking processes, procedures, policies, and systems for acute oversight.

IBM BWL has been used extensively to model areas of the business in the as-is and to-be state, creating the basis for automation and standardisation in future change projects across the globe.

The simple user interface and built in BPMN capabilities has allowed STC to include non-process experts to contribute and collaborate in this effort to understand

About Responsiv

Responsiv specialise in integration and automation solutions, connecting people to business, and business to markets. We provide cloud platforms, professional consulting, as well as support and managed services.

Industry

International Non-Governmental Organisation

Solution Components

IBM Blueworks Live
(BWL)
