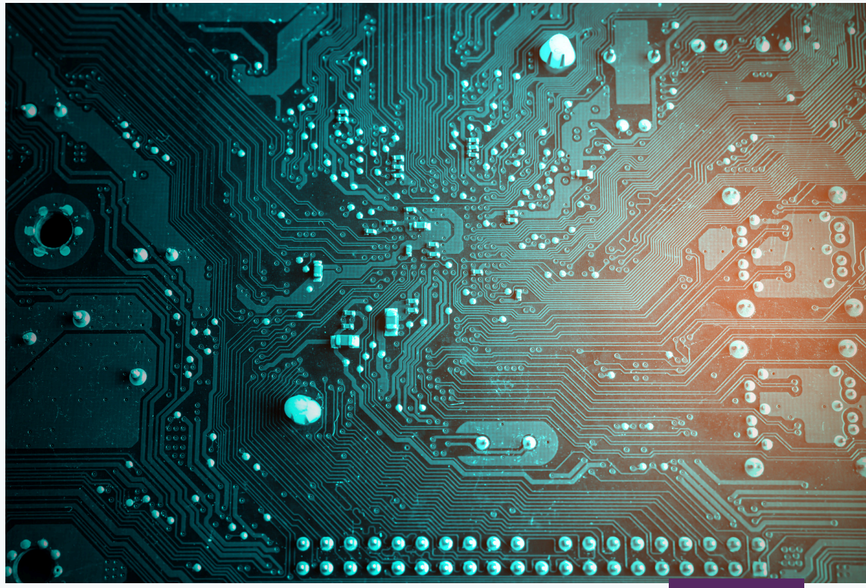
Responsiv Unity

responsiv

Responsiv Unity



Responsiv Unity is a robust yet simple and affordable platform that enables your organisation to build and deliver IT solutions quickly and effectively.

Use your Responsiv Unity to solve a specific business problem, or use as a foundation for multiple solutions. Add functionality as required by scaling your Responsiv Unity Nodes to meet demand.

Responsiv Unity is simple to install and operate, and cost-effective to use and scale.

Active Monitoring

Improve insight into your platform's performance with SNMP monitoring that connects with your existing dashboards.

Modular Scalability

Scale and add functionality as required, utilising capabilities including process, integration, and rules. Nodes configure at installation.

Self-Hosted

Self-host your Responsiv Unity Nodes in the location of your choice, including Azure, AWS, IBM Cloud, or on-premises (private data centres).

responsiv

Adding Value with Responsiv Unity

Out the Box	Out the box, low-risk solution for your complex IT challenges. Each Node is pre-designed and pre-configured to install and work without separate operating systems, monitoring software, or development tooling.
Installation	Streamline installation and configuration of your enterprise infrastructure; getting started and scalability is made a breeze with the Responsiv Asset Distribution Gateway.
Reduce Costs	Get the value of industry-leading software and middleware in a cost-effective, packaged solution. Remove the need for ILMT licence management and IBM audits.
Managed Service	Benefit from a lightweight managed service to support your Responsiv Unity installation, covering upgrades, patches, active monitoring, and more.
Support	Get expert technical support from our UK offices. Access specialist skills as required for a wealth of support activities.

Responsiv Unity Nodes

Efficiently scale your Responsiv Unity Nodes to increase functionality

Process

Automate mundane and repetitive processes and reduce the strain on staff and the need to rework errors. Gain insight into your processes to remove bottlenecks, unnecessary delays, and costs.

Rules

Deliver consistent and complex business rules for enterprise operational decisions and events. Ensure your staff and customers get an efficient and accurate outcome every time.

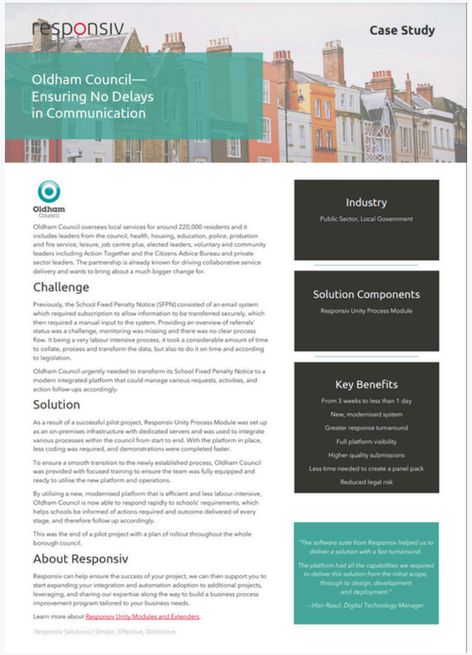
Integration

Industry-leading integration capabilities to connect your business, people, data, and markets. The wide range of pre-built end-point connectors promotes rapid system to system integration.

Console

Patch management, download and deployment, monitoring and alerting, and a managed service gateway that allows your Responsiv Unity components to raise tickets directly with our service desk.

responsiv



Oldham Council use Responsiv Unity Process Node to automate their School Fixed Penalty Notice process.

The Council saw time savings of **3 weeks** to **1 day** to complete the process.

This Scottish university used Responsiv Unity Integration Node (on cloud) to manage peaks in system usage.

The new infrastructure handles peaks in activity including student onboarding, course allocation, and student clearing.
