IBM SOFTWARE END-OF-SUPPORT UPDATES 2025

What is End-of-Support (EOS)?

End-of-Support is when a software vendor stops providing support for specified products or product versions.

After this point, you will no longer receive fixes, security patches, or standard support.

What does this mean for me?

If you do not act when your products go EOS, several risks and consequences can follow:

- Security vulnerabilities
- Compromised compliance
- Software incompatibility
- Performance and reliability issues
- Increased vendor support costs (traditional S&S)

IBM END-OF-SUPPORT

Product	Version	EOS Date
Business Automation Workflow	21.0.x	17/12/2025
Cloud Pak for Data	4.x	31/07/2025
Cloud Pak for Integration	2023.2.1	30/09/2025
MQ	9.2	30/09/2025
Db2	11.1	30/04/2025

SOLUTIONS

Responsiv Assist Extended Support

Cost-effective support coverage for your EOS products with access to skills and incidence response to keep your systems running.

Our IBM experts support your software, middleware, and custom applications - without needing a standard IBM support or subscription (S&S). We also provide skills to manage ILMT, with container-equivalents, to keep your licences compliant.

Upgrade

Upgrade to a newer version of your software for warranty, support, and security patches.

Responsiv provides licences and technical skills to upgrade your IBM software. If you prefer not to upgrade now, we offer fallback options for cases where your system becomes unrecoverable (e.g., when peripheral updates create incompatibility).
